A record-high 63.4 percent of the paper consumed in the U.S. was recovered for recycling in 2009. This is great news for the industry and the environment, and exceeds the industry's 60 percent recovery goal three years ahead of schedule. To balance growing global demand for recovered fiber and decreased paper consumption, increasing recovery nationwide remains a priority.

### did you know...

In 2009 a record-high 63.4% of the paper used in the U.S. was recovered for recycling.

Every ton of paper recycled saves more than 3.3 cubic yards of landfill space.

87 percent (268 million) of Americans have access to curbside or drop-off paper recycling programs.

In 2009 the amount of paper recovered for recycling averaged 325 pounds for each man, woman, and child in the United States.
